About InAmigos Foundation

“Uniting Minds for Change”

InAmigos Foundation (IAF) is a non-profit, Section 8 organisation registered in India — holding **80G & 12A** tax-exemption certification, **CSR-1** registration, and **ISO 9001:2015** certification, and is listed on the NGO Darpan portal of NITI Aayog.

The foundation runs education, community-welfare, and volunteer-driven outreach initiatives — including Bachpanshala, Udaan, and Jeevan — and partners with organisations such as Pratham Education Foundation.

Internship at a Glance

Role

Data Analyst / AI Data Analyst Intern

Duration

2 weeks (as per offer letter, 1 Aug 2026); tasks completed 5–17 Aug 2026

Mode

Flexible, primarily remote

Format

4 task-based assignments + optional fundraising & outreach

Objectives of the Internship

Research & verify genuine, active NGOs in the Delhi NCR education sector

Translate real NGO growth practices into actionable strategies

Investigate a social-impact topic using AI-assisted research, independently verified

Practise responsible AI use — verifying claims, never assuming them true

Compile and verify opportunities relevant to Indian students

Communicate completed work professionally through structured reports & LinkedIn

TASK 1

NGO Research & Data Collection

Verified profiles of genuine, active education NGOs across Delhi NCR

Identified, verified, and profiled ten genuine, currently active education-focused NGOs across Delhi NCR — spanning founding years from 1979 to 2015. Every data point came from official NGO websites, cross-checked against Wikipedia, nonprofit directories (Give.do, CSRBOX), and credible news coverage. Where a detail couldn't be verified, it was marked “Information Not Publicly Available” rather than guessed.

10

NGOs profiled

18

Page report

3

Source types cross-checked

TASK 2

AI & ML in Indian Healthcare

A social-impact report on early detection, accessibility & healthcare delivery

~70%

specialist posts vacant at rural CHCs

57–67%

of breast/cervical/head & neck cancers diagnosed late

86.4%

accuracy — TumorSense, my first-year ML project

43+ Cr

eSanjeevani tele-consultations enabled

TASK 3

Volunteer & Opportunity Data Compilation

Each opportunity was checked directly against its official application portal — eligibility, deadlines, and status confirmed rather than copied from secondary listings.

AI/ML, Data Science & Technology

Government & Research Institutions

Internships & Fellowships

Volunteering & Social Impact

TASK 4

AI Insights for NGO Growth

Five practical strategies, each grounded in a documented real-world example

Local Ownership, Not Central Control

Robin Hood Army's decentralised chapters

Structured Participation, Not One-Way Donation

Goonj's Cloth for Work programme

Impact Report Before the Next Ask

Show donors what their last gift achieved

Pitch a System, Not an Event

Offer partners an ongoing capability to fund

One Shared Record

Track every volunteer & donor in one place

Research & Verification Workflow

The same six-step process was applied consistently across all four tasks

Guiding principle: every AI-assisted first draft was treated as a research starting point — not a finished, trustworthy output. Every substantive claim was checked against an original or reliable source before being finalised.

Key Learnings & Skills Gained

Responsible AI Use

Never take AI output at face value — verify every claim against an original source before trusting it.

Research Rigor

Secondary research discipline: official sources first, cross-checked against independent ones.

Structured Documentation

Turning scattered findings into clear, well-organised reports and datasets.

Professional Communication

Documenting completed work publicly and professionally on LinkedIn.

Deadline Management

Delivering four distinct assignments within a compressed two-week window.

Social-Sector Awareness

Understanding how NGOs sustain growth through systems, not just activity.

Outcomes & Documentation

Four verified deliverables were produced — the NGO research report, the AI-healthcare social-impact report, the opportunities database, and the NGO growth-insights report — each submitted to InAmigos Foundation and documented publicly through LinkedIn for every completed task. As an optional secondary responsibility, the internship also contributed to the foundation's fundraising initiative and to growing its social-media presence across Instagram, YouTube, X, and LinkedIn.

“Had a good experience with InAmigos Foundation during my internship. The tasks were manageable and gave me practical exposure to research, report preparation, data, and AI. I also learned to verify AI-generated information through reliable sources.”

— Kshitij Yadav, closing review submitted on completion of the internship

Thank You

*Grateful to InAmigos Foundation and IILM University, Greater Noida
for this opportunity to learn, research, and contribute.*
